Green Phosphate · V. Ammonium Phosphate (V-Phosphate) · Vital Urea · Fusion Potash · Vital Potash · V-Mag Essential · Green Sulfur · V-Compost · Humi Grow · V-Transform · VL-Boron · Crop Force · VL-Micromix · Urea · grey: general products, not VAN brands

**Drill at sowing, first**
The seed drill's fertilizer box places the granule about 5 cm beside and below the seed row, never touching the seed. The root meets it first and the whole bag is in the root zone.

**Side-dress, second**
A band beside the row, by hand or planter, at sowing or the first irrigation, covered with soil.

**Broadcast, last**
Spread on the surface before the last ploughing or before an irrigation, and mixed in. Most of the bag is away from the root.

**Indicative programme.** Built on best practice and the nutrient requirement of the crop, per acre. VAN prepares farm-specific plans against your soil analysis, yield target and the other variables that decide a rate: ask for one. Vital Urea is applied by drilling at sowing, side dressing or broadcasting, never by fertigation; the fertigation rows in the nitrogen group are general urea, a different material. Every VAN batch is tested before it ships; the batch number on the bag brings its certificate.

Rows as published on van.com.pk/crops/banana-year1.html, 27 Oct 2026. Rates are per acre unless marked. Where a row says "Drill at sowing; broadcast if no drill", the drill is first by VAN's order of methods.
