- V-Mag Essential
- Cala-Mag V
- Humi Grow
- V-Zinc
- VL-Boron
- Urea
- CAN
- grey items: general products, not VAN brands

Indicative programme. Built on best practice and the nutrient requirement of the crop, per acre. VAN prepares farm-specific plans against your soil analysis, yield target and the other variables that decide a rate: ask for one. Vital Urea is applied by drilling at sowing, side dressing or broadcasting, never by fertigation; the fertigation rows in the nitrogen band are general urea, a different material. Every VAN batch is tested before it ships; the batch number on the bag brings its certificate.

Rows as published on van.com.pk/crops/tomato.html, 27 Sep 2026. Rates are per acre unless marked. Where a row says "Drill at sowing; broadcast if no drill", the drill is first by VAN's order of methods.
