DEALER TRAINING · NOVEMBER 2026

Crop Force

Nitrogen, phosphate and potash in every granule, in 2 grades: 15-15-15 for growth, 12-12-18 for the filling stage.

VAN wrote this deck for its dealers and field team. A dealer can repeat its words to a grower.

THE 30-SECOND EXPLANATION

What a dealer says to a grower in 30 seconds.

Crop Force has nitrogen, phosphate and potash in every granule, at a fixed ratio. It is a compound, not a blend, registered under PS 933-2026. It comes in 2 grades. 15-15-15 has equal parts of the 3 nutrients and is for the growing crop, in 1 kg and 20 kg packs. 12-12-18 has more potash and is for the stage when the crop sets and fills, in a 10 kg bag. In 2024-25, potash was only 1% of the fertiliser nutrients applied in Pakistan (National Fertilizer Development Centre, NFDC), as the Crop Force bag prints. A grower who applies urea and DAP but no potash gets a crop that grows tall and fills poorly; this bag puts on the potash in the same pass as the nitrogen and phosphate. It is a soil granule for the standing crop, put in a covered band beside the row. The crop plans name 12-12-18, side-dressed at grand growth and maturity, on garlic, watermelon, banana and citrus.

The 4 points it must cover

1. The bag: 15-15-15 in 1 kg and 20 kg; 12-12-18 in 10 kg. PS 933-2026, CM/L-4298/2026. 3 kg each of N, P_2O_5 and K_2O in a 20 kg bag.
2. The reason: in 2024-25, potash was only 1% of the nutrients applied in Pakistan. 1 bag at a fixed ratio applies potash with N and P, so the grower does not have to guess 3 rates.
3. The 2 grades: equal parts for growth; more potash for the filling stage. The crop plan rows name 12-12-18.
4. The method: a soil granule for the standing crop. The crop plans side-dress it in a covered band beside the row, at grand growth and maturity.

Explain the product in simple words a grower uses, and keep to the figures on these slides. Every figure in this 30-second explanation is on the bag, in the published crop plan or in the named evidence on the slides that follow.

THE BAG

What the bag says, and what it is registered as.

20 kg

the 15-15-15 bag. 3 kg of N, 3 kg of P_2O_5 and 3 kg of K_2O in every bag, from the declared analysis. The same grade is also sold in a 1 kg pack.

15-15-15

N, P_2O_5 and K_2O at least 15% each, in equal parts, for the growing crop.

12-12-18

N and P_2O_5 at least 12%, K_2O at least 18%, in the 10 kg bag: the grade with more potash, named in the crop plans.

1%

of the fertiliser nutrients applied in Pakistan in 2024-25 was potash (NFDC), as the Crop Force bag prints.

2 datasheets

1 per grade, on van.com.pk. Both grades are covered by 1 standard and 1 licence.

Crop Star

the former name of the same product, renamed Crop Force in July 2026.

Registered as	Pakistan Standard	Manufacturing licence
Crop Force	PS 933-2026	CM/L-4298/2026

If a grower asks about registration, give the licence number. Do not give an expiry date for the licence.

A GROWER'S QUESTION

“Urea, DAP and potash: 3 bags, 3 rates, and I never know if I got the ratio right. Is there a bag that already has all 3?”

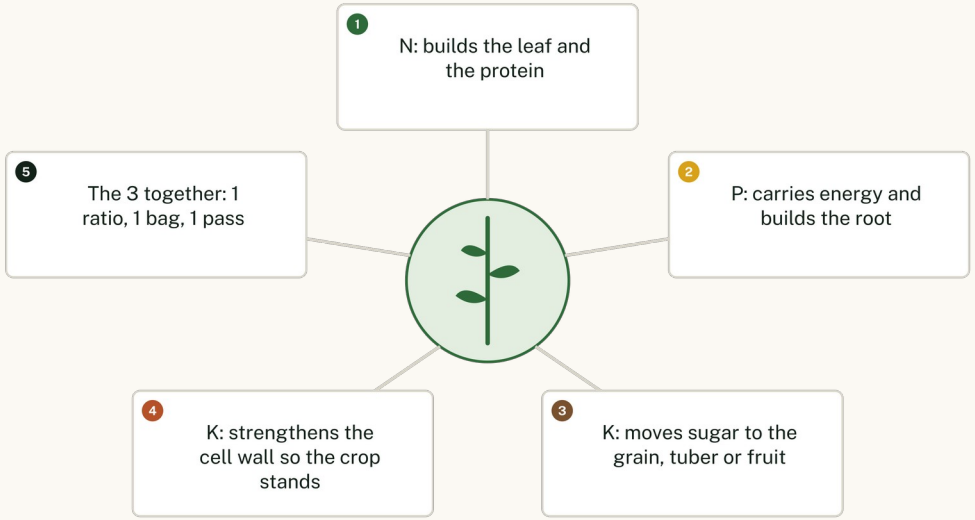

The grower is describing common practice in Pakistan: heavy use of nitrogen and phosphate, very little potash, and 3 rates that are guessed rather than planned. The answer has 3 parts: why the balance between the 3 nutrients matters more than any one of them, why there are 2 grades, and why a soil granule has to be placed where the root grows.

The next 3 slides give the 3 answers, 1 idea on each slide.

ANSWER 1 OF 3

A crop’s growth is limited by the nutrient in shortest supply, so Crop Force supplies all 3 main nutrients together.

Nitrogen builds the leaf. The plant uses phosphorus to transfer energy and to build roots. Potash moves the sugar the leaf makes into the grain, tuber or fruit, and strengthens the cell wall so the crop stands. A crop can grow only as well as its scarcest nutrient allows, so where the soil is short of potash, more urea will not help. In 2024-25, potash was only 1% of all the fertiliser nutrients applied in Pakistan (NFDC). In 2023, Pakistan applied about 83 kg of nitrogen for every 1 kg of potash (K_2O) (Food and Agriculture Organization, FAO). Crop Force puts the 3 in 1 bag at a fixed ratio, so the potash goes on in the same pass as the nitrogen and phosphate, and the ratio is not guessed.

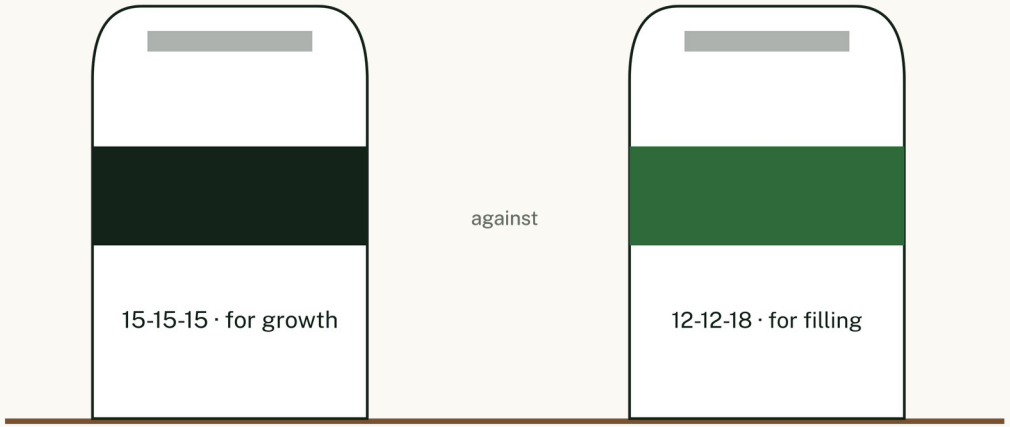

The jobs of N, P and K, as VAN’s 17-nutrients page gives them. The drawing illustrates the idea; it is not a measurement.

Say it like this: “More urea will not help a crop that is short of potash. This bag gives nitrogen, phosphate and potash together.”

ANSWER 2 OF 3

Crop Force comes in 2 grades: 15-15-15 for the growing crop, and 12-12-18, with more potash, for the filling stage.

15-15-15 carries the 3 nutrients in equal measure. It is the grade for the growing plant. 12-12-18 carries 18% potash against 12% nitrogen and 12% phosphate. It is for the stage when the crop has stopped making leaf and started setting and filling: tuber, boll, fruit. The published crop plans name 12-12-18, at grand growth and maturity. Choose the grade by the crop's stage. According to general agronomy, cereals take up most of their potash before flowering, while potato, banana, tomato and orchard fruit keep taking it up while they fill, so 12-12-18 matters most on those crops.

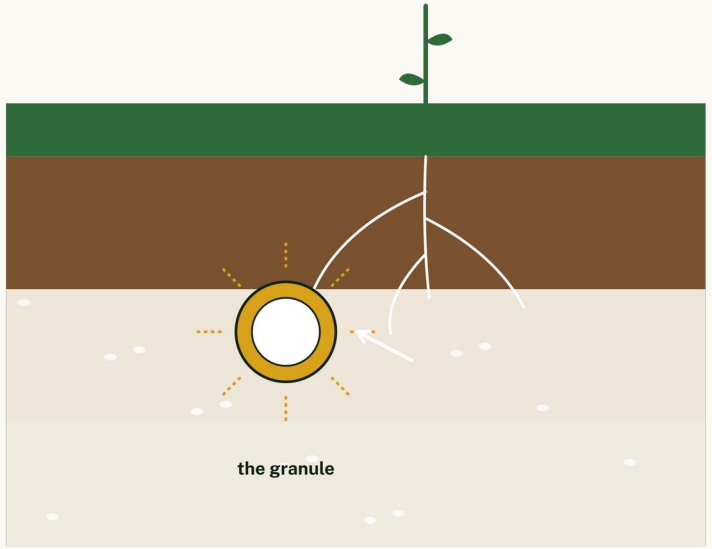

The 2 bags show the 2 grades.

Say it like this: "Use 15-15-15 while the crop is growing and 12-12-18 when it starts to fill. If you use 1 grade all season, it will not suit 1 of the 2 stages."

ANSWER 3 OF 3

A soil granule has to be placed where the root will grow.

Crop Force is a compound granule for the soil: every granule carries all 3 nutrients at the ratio on the bag, so they cannot separate in the bag or the spreader. On soil above pH 8, the phosphate reacts with calcium within a few centimetres of the granule, and potash moves little in the soil. So the granule has to be placed where the root will grow. The crop plans put it in a band beside the row of the standing crop, covered with soil, where the roots are. Broadcast on the surface, most of the bag is away from the root until it is worked in. Fertiliser left on the surface does not reach the root.

Nitrogen, phosphate and potash in every granule, at the declared ratio: a compound, not a blend. Placed in a band beside the row, below the surface, where the root grows.

The granule beside the row, with the root reaching it. The order of methods is on the next 2 slides.

Say it like this: “Put it where the root is: in a band beside the row, covered. Do not leave it on top.”

THE EVIDENCE

What is verified for Crop Force, and what is not.

No trial of Crop Force is on VAN's record. A dealer may state the following as facts, and should say where each comes from: what the bag declares, the licence, the national potash figure, the Punjab soil survey and the 2 datasheets.

Item	What it says	How a dealer may use it
The bag	Crop Force, NPK 15-15-15 (N, P_2O_5, K_2O 15% min each) in 1 kg and 20 kg; 12-12-18 (12, 12, 18% min) in 10 kg. Formerly Crop Star, renamed July 2026.	As fact. Read the grade off the front of the bag in hand.
The licence	Pakistan Standard PS 933-2026 (Multinutrient Fertilizer); manufacturing licence CM/L-4298/2026. 1 licence covers both grades.	As fact. The number, never an expiry date.
The datasheets	2 technical datasheets on van.com.pk, 1 per grade.	Hand the grower the datasheet for his grade.
National potash use	In 2024-25, potash was 1% of all the fertiliser nutrients applied in Pakistan (NFDC; also printed on the Crop Force bag). In 2023, Pakistan applied about 83 kg of nitrogen for every 1 kg of potash (K_2O) (FAO).	As fact.
The Punjab soil survey (770,160 samples, about 2016 to 2018)	87.8% of samples below 180 parts per million (ppm) available potassium, the level Punjab soil laboratories treat as adequate; 59.1% of samples below 7 ppm available phosphorus, the low level; 97.9% below 15 ppm, the adequate level; 69.1% above pH 8.	As fact about the soil. Never as product performance.
Not on VAN's record	A Crop Force trial or yield figure; a granule-uniformity or segregation figure for this product; a Pakistani uptake curve; a segregation figure for a blend against this compound.	Not said.

Sources: the bag; the Pakistan Standard and licence register; the crop plans on van.com.pk; the VAN farmer price sheet, Aug 2026; NFDC (2024-25) and FAO (2023) for national potash use; the Punjab soil survey (770,160 samples, tested in about 2016 to 2018); the 2 Crop Force datasheets on van.com.pk.

A 20 kg bag of 15-15-15 supplies 3 kg each of N, P_2O_5 and K_2O for Rs 9,000.

Prices are the delivered farmer price from the VAN farmer price sheet, Aug 2026. Nutrients are from the declared analysis. The 10 kg bag is the 12-12-18 grade; the 1 kg and 20 kg packs are 15-15-15.

Pack	Weight	N	P_2O_5	K_2O	Rupees
Crop Force 15-15-15, bag	20 kg	3.0 kg	3.0 kg	3.0 kg	9,000
Crop Force 15-15-15, pack	1 kg	150 g	150 g	150 g	750
Crop Force 12-12-18, bag	**10 kg**	**1.2 kg**	**1.2 kg**	**1.8 kg**	**4,900**

A 20 kg bag puts 3 kg of each nutrient in the ground for Rs 9,000. The 10 kg bag of 12-12-18 puts on 1.8 kg of K_2O and 1.2 kg each of N and P_2O_5, for Rs 4,900. Do not work out a cost per kilogram of nutrient: the grower buys the 3 nutrients together for their ratio.

Crop Force 1 kg Rs 750, 10 kg Rs 4,900, 20 kg Rs 9,000: the VAN farmer price sheet, Aug 2026. 3.0 kg = 20 × 0.15; 150 g = 1 × 0.15; 1.2 kg = 10 × 0.12; 1.8 kg = 10 × 0.18. Grade per pack as VAN registers it.

The 4 crop plan rows use Crop Force 12-12-18, from 10 kg to 20 kg per acre.

Every Crop Force row in the crop plans names the 12-12-18 grade. Rate and pack are as printed; nutrients are from the declared analysis; rupees are at the VAN farmer price sheet, Aug 2026.

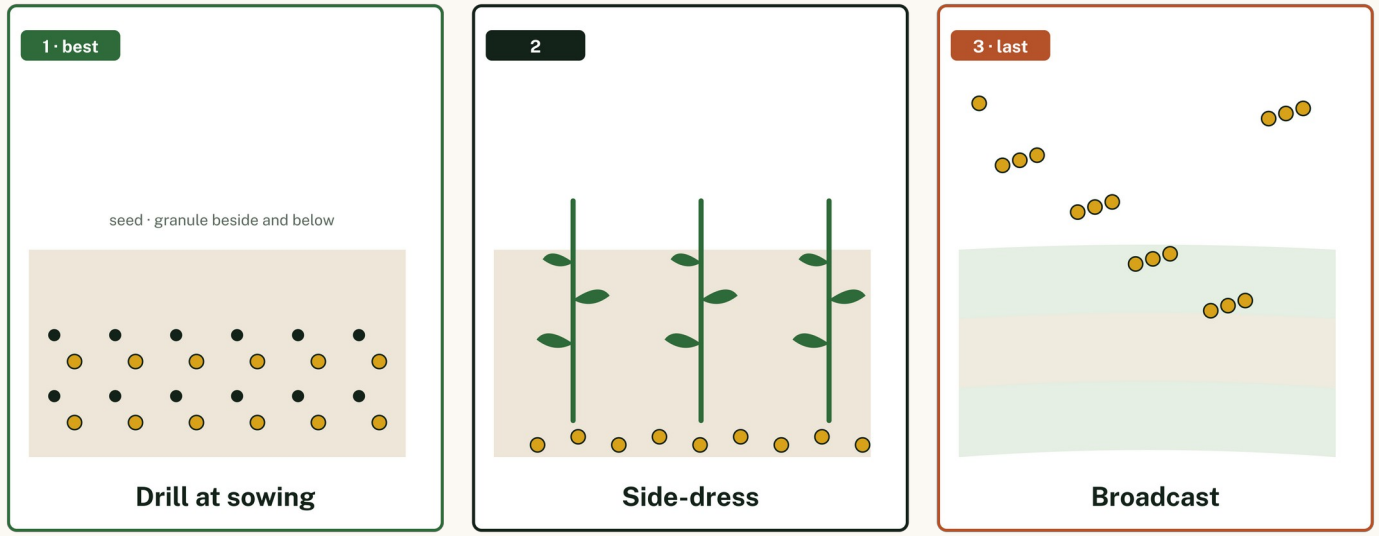

Crop	Crop Force per acre	N	P_2O_5	K_2O	Stage, method and rupees
Garlic	1 bag of 10 kg	1.2 kg	1.2 kg	1.8 kg	Maturity, side dressing/placement, 4,900
Watermelon	1 bag of 10 kg	1.2 kg	1.2 kg	1.8 kg	Maturity, side dressing/placement, 4,900
Banana, 1st year	2 bags of 10 kg	2.4 kg	2.4 kg	3.6 kg	Maturity, side dressing/placement, 9,800
Citrus, 5 years and over	1 bag of 10 kg	1.2 kg	1.2 kg	1.8 kg	Grand Growth, side dressing/placement, 4,900

The crop plans name 12-12-18 at grand growth and maturity, in a band beside the row. Per acre: garlic 10 kg (Rs 4,900); watermelon 10 kg (Rs 4,900); banana 20 kg (Rs 9,800); citrus 10 kg (Rs 4,900). The 15-15-15 grade is sold in the 1 kg and 20 kg packs.

Rows from the crop plans on van.com.pk, as printed. Nutrients = rate × pack weight × declared percentage (12-12-18); rupees = rate × the price of the pack: 10 kg Rs 4,900.

HOW IT IS APPLIED

Crop Force goes on the soil of a standing crop, in a covered band beside the row.

Side-dress, as the crop plans do

A band beside the row, by hand or planter, covered with soil. Every Crop Force row in the crop plans prints “Side dressing/Placement”: citrus at grand growth and garlic, watermelon and banana at maturity. In a standing crop, a side-dressed band still places the fertiliser near the root.

Drilling is for sowing

At sowing, the seed drill’s fertiliser box places a granule about 5 cm beside and below the seed row, never touching the seed. VAN lists side-dressing and band placement as the methods for Crop Force, and no crop plan applies it at sowing.

Broadcast, last

Spread before an irrigation, and mixed in at once. Fertiliser left on the surface is not where the root is. Spread it evenly: a strip the spreader misses gets no fertiliser, and the difference shows at harvest.

For Crop Force, the drilling row does not apply.

VAN gives this order for granules applied at or before sowing. The crop's response to the same fertiliser depends on where it is placed.

Preference	Method	What it means	Why
1 · best	Drill at sowing	The seed drill's fertiliser box places the granule about 5 cm beside and below the seed row, never touching the seed.	The root reaches a drilled granule sooner than a side-dressed or broadcast one. The granule has the least contact with air, sun and free calcium at the surface, and all of the fertiliser is placed in the root zone.
2 · second best	Side-dress	The granules are placed in a band beside the row, by hand or with a planter, at sowing or at the first irrigation, and covered with soil.	The band is still near the root, but it goes on later and shallower than a drilled granule.
3 · last option	Broadcast	The granules are spread on the surface before the last ploughing or before an irrigation, and mixed in.	Most of the fertiliser lies away from the root, and most of it stays near the surface, in contact with air, sun and free calcium.

In VAN's own fields and partner fields, on wheat, maize and sugarcane, basal fertiliser drilled at sowing has given 7 to 9% more yield per acre than the same bag broadcast: the mean of replicated observations across regions, not a published trial.

In the crop plans, Crop Force is applied by band placement or side-dressing at the grand growth and maturity stages.

OBJECTION 1 OF 7

“9,000 for 20 kg? Urea and DAP are cheaper per bag.”

What the dealer says

They are different bags for different jobs. Urea supplies nitrogen, and DAP supplies nitrogen and phosphate. Neither supplies potash, and in 2024-25 potash was only 1% of all the fertiliser nutrients applied in Pakistan. This bag gives 3 kg of nitrogen, 3 kg of phosphate and 3 kg of potash together, at a ratio you do not have to guess. Write down the fertiliser you buy now: for many growers, there is no potash on the list. Crop Force supplies that potash.

The facts behind the answer

- Crop Force 20 kg Rs 9,000; 1 kg Rs 750; 10 kg of 12-12-18 Rs 4,900 (VAN farmer price sheet, Aug 2026).
- 3 kg N, 3 kg P_2O_5 and 3 kg K_2O in a 20 kg bag, from the declared analysis (the bag).
- In 2024-25, potash was 1% of all the fertiliser nutrients applied in Pakistan (NFDC; printed on the Crop Force bag).

Never say: “It gives you X more maunds” or a rupees-per-acre return. No yield figure exists for the product. Do not compare its cost per kilogram of nutrient with another bag.

OBJECTION 2 OF 7

“Which grade do I buy?”

What the dealer says

Choose by the crop’s stage. Use 15-15-15 while the crop is making leaf, root and stem. Use 12-12-18 when the crop starts to set and fill: tuber, boll, fruit; the published crop plans name it at grand growth and maturity, on garlic, watermelon, banana (1st year) and citrus. If you use 1 grade all season, it will not suit 1 of the 2 stages.

The facts behind the answer

- Every Crop Force row in the crop plans names 12-12-18 (the crop plans on van.com.pk).
- 15-15-15 is sold in 1 kg and 20 kg; 12-12-18 in 10 kg, the bag the crop plan rows name.
- Cereals take most of their potash before flowering; potato, banana, tomato and orchard fruit keep taking it through fill (general agronomy).

Never say or give: that 12-12-18 is “balanced”. It is weighted towards potash. Never give a crop or a rate that the crop plan does not print.

OBJECTION 3 OF 7

“Is it a blend? Will the 3 separate in the bag or the spreader?”

What the dealer says

It is a compound, not a blend. Every granule carries all 3 nutrients at the ratio on the bag, so nothing can separate in the bag or the spreader: the last handful is the same as the first. It is registered under PS 933-2026, and every batch is tested at VAN Lab before it ships. Spread it evenly and work it in; spreading it evenly is the grower’s job.

The facts behind the answer

- NPK 15-15-15 and 12-12-18, PS 933-2026, CM/L-4298/2026 (the bag and the licence register).
- Every batch is tested at VAN Lab before it ships. The laboratory is accredited by the Pakistan National Accreditation Council (PNAC) as LAB 336.
- A compound: every granule carries N, P and K at the declared ratio (VAN, 27 Sep 2026).

Never say or give: any segregation percentage for a blend, or a competitor’s name. Do not say “blends are bad”; say “this one cannot separate”.

OBJECTION 4 OF 7

“Can I put it through the drip or the flood water?”

What the dealer says

Crop Force is a soil granule: it is side-dressed or placed in a covered band beside the row. Every crop plan row prints side dressing or placement. If the 1 kg pack you have is a soluble powder grade, the pack and the datasheet will say so; do not dissolve a granular bag and expect it to pass the drip filter. For an NPK to put through the drip, ask VAN which product your crop plan names.

The facts behind the answer

- VAN names side-dressing and band placement for Crop Force; no crop plan row says fertigation or foliar.
- Every Crop Force row prints side dressing/placement (the crop plans on van.com.pk).
- The 2 datasheets on van.com.pk say which form each grade is sold in.

Never say or give: any fertigation or foliar rate for Crop Force. None is published.

OBJECTION 5 OF 7

“Which stage, and how much?”

What the dealer says

Use what the crop plan gives for your crop. Garlic: 1 bag of 10 kg per acre at maturity. Watermelon: 1 bag of 10 kg per acre at maturity. Banana, 1st year: 2 bags of 10 kg per acre at maturity. Citrus, 5 years and over: 1 bag of 10 kg per acre at grand growth. All of it goes in a band beside the row, covered. For a crop with no Crop Force row, the plan on van.com.pk names the products to use, and I follow that plan.

The facts behind the answer

- Garlic: 1 bag of 10 kg at maturity (the crop plans on van.com.pk).
- Watermelon: 1 bag of 10 kg at maturity (the crop plans on van.com.pk).
- Banana, 1st year: 2 bags of 10 kg at maturity (the crop plans on van.com.pk).
- Citrus, 5 years and over: 1 bag of 10 kg at grand growth (the crop plans on van.com.pk).
- Side-dressing or placement on every row.

Never say: “1 bag an acre on every crop.” A general rate per acre is not a crop plan rate.

OBJECTION 6 OF 7

“Is it registered? What is the licence?”

What the dealer says

It is registered under Pakistan Standard PS 933-2026 (Multinutrient Fertilizer), with manufacturing licence CM/L-4298/2026, and VAN is the registered maker. 1 licence covers both grades, and each grade has its own datasheet on van.com.pk. Every batch is tested at VAN Lab, PNAC LAB 336, before it ships. Enter the batch number from the bag on van.com.pk, and you can read the certificate for that batch.

The facts behind the answer

- Crop Force: PS 933-2026, CM/L-4298/2026 (the licence register on van.com.pk).
- 2 datasheets on van.com.pk, 1 per grade.
- Formerly Crop Star, renamed Crop Force in July 2026.

Never say or give: a licence expiry date, or “government approved” as a claim about performance.

OBJECTION 7 OF 7

“I used it and my soil test did not change.”

What the dealer says

It will not change your soil test, and VAN does not say it will. A bag puts 3 kg of each nutrient into the band where the root is; a soil test measures the whole field. If your soil test shows low available potassium, it takes potash at sowing, season after season, to raise it. Until then, the crop gets most of its potash from the soil itself; in the Punjab soil survey, 87.8% of samples had less than 180 ppm of available potassium, the level Punjab soil laboratories treat as adequate. Crop Force feeds the roots near the band. Judge it by how the crop grows, not by the soil test report.

The facts behind the answer

- 87.8% of samples below 180 ppm available potassium, the adequate level; 59.1% below 7 ppm available phosphorus, the low level; 97.9% below 15 ppm, the adequate level (the Punjab soil survey, 770,160 samples, about 2016 to 2018).
- A 20 kg bag puts 3 kg of each nutrient into the band, not across the field.
- VAN claims no soil-test change for any of its granules.

Never say: “It improves your soil” or “it raises your soil potash reading”.

ITS PLACE IN THE CROP PLANS

Crop Force in the published crop plans, per acre.

Crop	Stage	Rate per acre	Method	Pack
Garlic	Maturity	1 bag	Side dressing/Placement	10 kg
Watermelon	Maturity	1 bag	Side dressing/Placement	10 kg
Banana, 1st year	Maturity	2 bags	Side dressing/Placement	10 kg
Citrus, 5 years and over	Grand Growth	1 bag	Side dressing/Placement	10 kg

The rows are printed as published in the crop plans on van.com.pk. Coverage: these are all 4 rows in the 4 crop plans that name Crop Force. Every row says side-dressing or placement and uses the 10 kg bag. Each rate is per acre, and the crop page scales it to the size of the field.

WHAT VAN DOES NOT CLAIM FOR THIS PRODUCT

A dealer who makes any of these claims is speaking for himself, not for VAN.

1. A yield figure, or that a balanced grade gives X% more than urea and DAP alone. No Crop Force trial exists.
2. That 12-12-18 is “balanced”. It is weighted towards potash on purpose.
3. A segregation percentage for any blend, or a competitor’s name beside the word blend. The only claim is that Crop Force is a compound.
4. An uptake curve, or the percentage of potash taken up at any stage. No Pakistani measurement of one exists.
5. A fertigation or foliar rate. Crop Force is a soil granule, and no such rate is published.
6. A soil-test change, or that 1 bag is the crop’s whole plan. The crop’s full plan is the crop plan on van.com.pk.

HOW A GROWER VERIFIES A BAG

Every batch is tested, and the batch number on the bag identifies its certificate.

1 · The batch number

Every bag carries the batch number. Read it to the grower and show him where it is printed.

2 · The certificate of analysis

On van.com.pk, a grower can read the certificate of analysis for any bag by entering the batch number printed on it. The grower does not need to post a sample.

3 · The laboratory

VAN Lab is accredited by the Pakistan National Accreditation Council (PNAC) to ISO/IEC 17025:2017, the international standard for testing laboratories, as LAB 336. Every batch is released through the laboratory before it ships. The certificate carries the laboratory's number.

What a certificate for Crop Force shows

The certificate gives the tested values for the batch against the declared analysis: nitrogen, P_2O_5 and K_2O against 15-15-15 or 12-12-18. It also shows the batch number, and the Pakistan Standard PS 933-2026 and licence CM/L-4298/2026 printed on the bag. Each grade has its own datasheet on van.com.pk. This training shows no batch result; a grower can read the certificate of his own batch on van.com.pk by its batch number.

THE URDU LINES · REVIEW STATUS UNDER EACH LINE

The lines a dealer says in Urdu.

The first line is the product's main message. Where its nutrient has one, the line gives VAN's promise word: the 1-word brand message VAN uses for that nutrient.
