DEALER TRAINING · NOVEMBER 2026

Vital Potash

Vital Potash contains 11% nitrogen and 44% K_2O, is fully water soluble and has boron coated onto the granule in 2 forms. VAN makes it in Lahore in 20 kg bags.

VAN wrote this deck for its dealers and field team. A dealer can repeat its words to a grower.

THE 30-SECOND EXPLANATION

What a dealer says to a grower in 30 seconds.

Vital Potash is a fully water-soluble fertiliser with 11% nitrogen and 44% K_2O. It is sold in a 20 kg bag, and boron is coated onto the granule in 2 forms. The crop needs nitrogen to grow leaf and potash to fill grain, tubers and fruit. Yet in 2023 Pakistan applied 83 kg of nitrogen for every 1 kg of potash (K_2O). Apply Vital Potash in flood or drip irrigation water at the stages each crop plan gives, most often grand growth and maturity, usually ½ bag or 1 bag per acre each time. Its 11% nitrogen gives the plant some nitrogen at these stages, too little to start a new burst of leaf growth. The basal potash at land preparation is Fusion Potash or SOP.

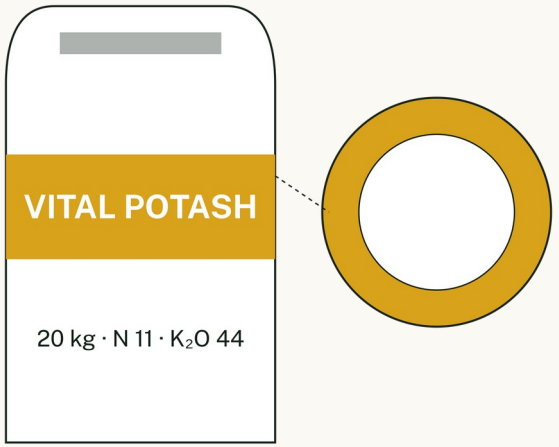

The 4 points it must cover

1. The bag: 20 kg, N 11, K_2O 44, water soluble, PS 933-2026. Each bag carries 8.8 kg of K_2O and 2.2 kg of N.
2. How it works: the crop needs potassium to move the sugar made in its leaves into the grain, tubers or fruit.
3. The stage: the stages each crop plan gives, most often grand growth and maturity, in the water. It does not supply all the season's potash.
4. Boron: coated on the granule in 2 forms, fast-acting sodium borate and slow-release calcium borate. No boron percentage is given.

Explain the product in simple words a grower uses, and keep to the figures on these slides. Every figure in this 30-second explanation is on the bag, in the published crop plan or in the named evidence on the slides that follow.

THE BAG

What the bag declares, and how it is registered.

20 kg

bag weight. Each bag carries 8.8 kg of K_2O and 2.2 kg of nitrogen, by the declared analysis. A 5 kg pack is also sold.

K_2O 44

potash, declared on the front as NPK 11.0.44. The product is fully water soluble.

N 11

nitrogen: some nitrogen for the crop, too little to start a new burst of leaf growth.

1 to 4

nitrogen to K_2O in the bag. In the IPNI uptake tables used on van.com.pk, wheat, maize, rice, sugarcane, canola and tomato take up more K_2O than nitrogen.

2014

the year VAN began coating boron onto the potash granule on its own coating line, developed and built locally.

1%

of the fertiliser nutrients applied in Pakistan in 2024-25 was K_2O (NFDC), as the Crop Force bag prints.

Registered as	Pakistan Standard	Manufacturing licence
Vital Potash	PS 933-2026	CM/L-4124/2025

If a grower asks about registration, give the licence number. Do not give an expiry date for the licence.

A GROWER'S QUESTION

“I fed my crop well, but it still filled poorly: the cotton bolls dropped and the grain stayed thin. Why?”

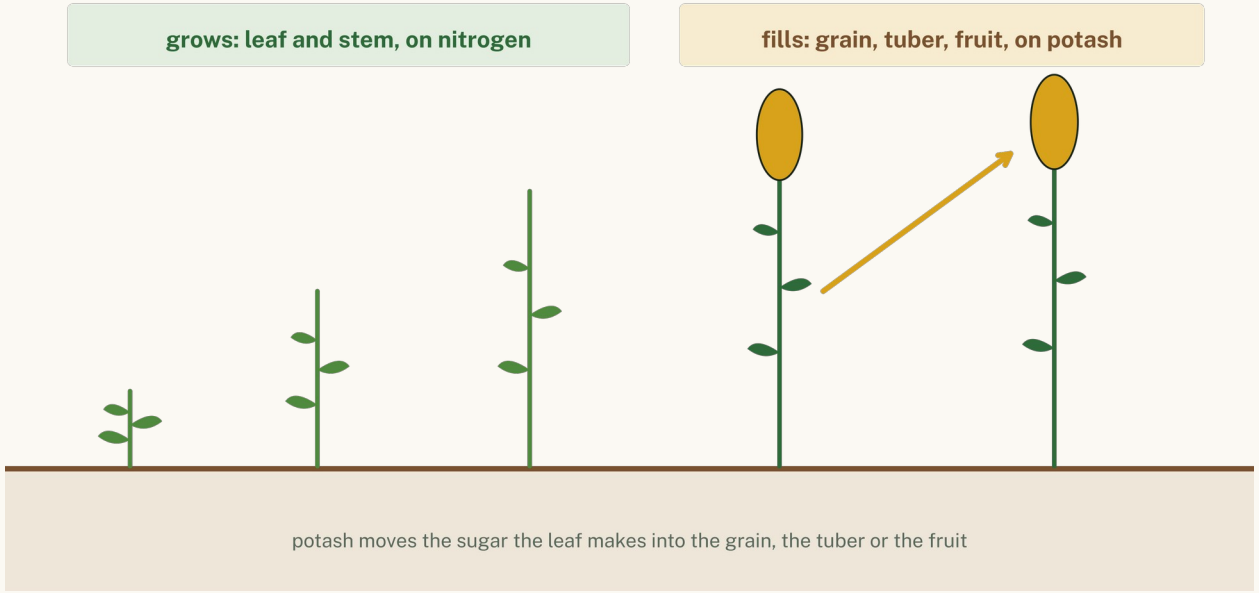

The Vital Potash page of van.com.pk asks this question in the grower’s own words. The likely cause is that he gave nitrogen and the crop grew, but he gave no potash at filling. The answer has 3 parts: what potash does, when the crop needs it, and what is coated on the granule.

The next 3 slides give the 3 answers, 1 idea on each slide.

ANSWER 1 OF 3

Potash is needed to fill grain, tubers and fruit.

The crop needs potassium to move the sugar made in its leaves into the grain, tubers or fruit. In plants in general, potassium also strengthens cell walls, which helps them withstand heat, drought and disease. In the IPNI uptake tables used on van.com.pk, wheat, maize, rice, sugarcane, canola and tomato take up more K_2O than nitrogen. Yet in 2023 Pakistan applied 83 kg of nitrogen for every 1 kg of potash (K_2O).

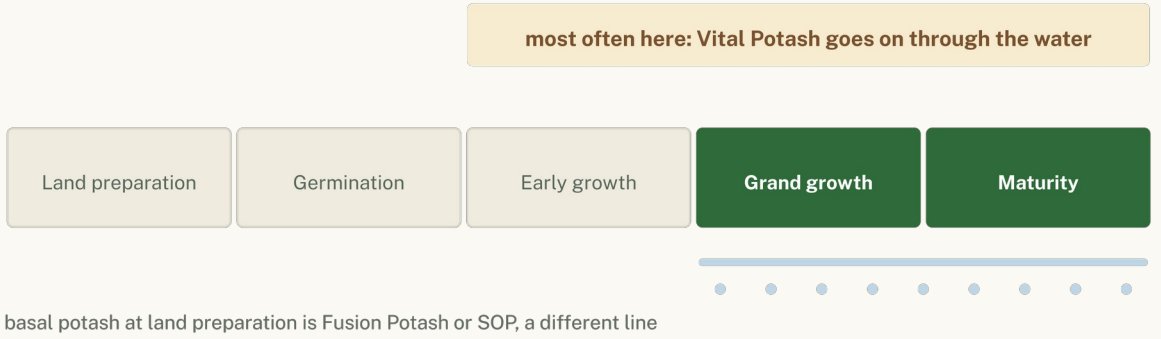

The leaf stage is drawn in green and the filling stage with a head of grain. The drawing shows the idea; it is not a measurement.

Say it like this: “You gave the crop nitrogen to grow, but no potash when it was filling.”

ANSWER 2 OF 3

Vital Potash goes on at the stages each crop plan gives, most often grand growth and maturity.

Vital Potash contains N 11% and K_2O 44% and is fully water soluble. It is applied in irrigation water, by fertigation or in flood irrigation. Its 11% nitrogen gives the plant some nitrogen at these stages, too little to start a new burst of leaf growth. It adds potash at these stages; it does not supply all the potash the crop needs over the season.

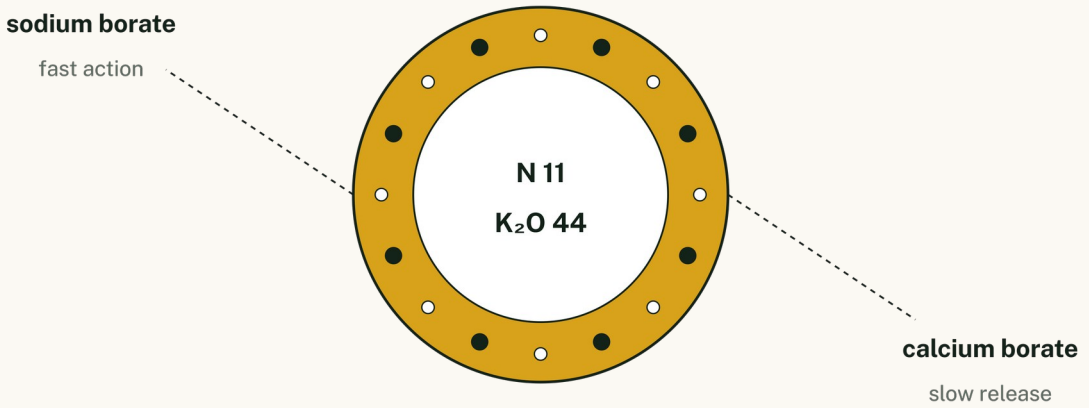

The 5 stage names are those used on van.com.pk. The crop plan slides show the stages at which each crop receives Vital Potash.

Say it like this: “Put it through the water when your crop plan says. It is not the potash for sowing.”

ANSWER 3 OF 3

Boron is coated on the granule in 2 forms.

In plants, boron is needed to move sugar to the flowers and to set seed and fruit. This is the role of boron in plants in general, not a result for Vital Potash. Since 2014, VAN has coated boron onto the potash granule on its own coating line, developed and built locally. Each granule carries boron in 2 forms: sodium borate, which acts quickly, and calcium borate, which releases slowly. Because the boron is coated on each potash granule, the boron and the potash cannot separate in the bag, and every application carries both. The bag does not declare a boron percentage, so VAN gives none.

coated on VAN's own line since 2014. Boron is named on this deck, never numbered.

The 2 forms of boron are drawn as 2 kinds of fleck.

Say it like this: "The boron is coated on the granule in 2 forms, so it lands where the potash lands."

THE EVIDENCE

What is verified for Vital Potash, and what is not.

VAN has no trial of Vital Potash itself on record. A dealer may state each item below only in the way the right-hand column allows.

Item	What it says	How a dealer may use it
The bag	NPK 11.0.44, “multi nutrient fertilizer”, water soluble, 20 kg. Boron is not named on the front.	As fact. VAN names the boron on the Vital Potash page of van.com.pk, but gives no percentage.
The licence	Pakistan Standard PS 933-2026, manufacturing licence CM/L-4124/2025.	As fact.
National potash use	K_2O was 1% of the fertiliser nutrients applied in Pakistan in 2024-25, the same share as in 1999 to 2002 (NFDC; FAO). In 2023, Pakistan applied 83 kg of nitrogen for every 1 kg of potash (K_2O) (FAO).	As fact. The 1% share is printed on the Crop Force bag and on van.com.pk.
Published research, not VAN trials	Sindh banana (Memon et al. 2010): an improved practice, with far more potash than the farmers’ own practice, raised yield. Cotton in Multan (Hussain, Ali and Gardezi 2021): higher soil potassium reduced boll shedding.	Spoken, as research on potash. Never as a Vital Potash result.
Uptake pattern	In the IPNI uptake tables used on van.com.pk, wheat, maize, rice, sugarcane, canola and tomato take up more K_2O than nitrogen.	As fact, from the published tables.
Not on file	A trial, lab record or literature note specific to Vital Potash; a boron figure; a yield figure for the product.	Not said.

Sources: VAN’s flagship audit, section 2c (items printed on the pack or verified); the regulatory table and the Vital Potash page on van.com.pk. The 2019 claims “builds plant immunity” and “enhances fruit setting” are withdrawn and are not used.

What a bag, a pack and a wheat application cost, and what they carry.

Prices are delivered farmer prices from the VAN farmer price sheet, August 2026. K_2O and nitrogen are calculated from the declared analysis. The wheat crop plan applies ½ bag at grand growth, by fertigation.

Vital Potash, N 11 · K_2O 44	Weight	K_2O	Nitrogen	Price (Rs)
1 bag of 20 kg	20 kg	8.8 kg	2.2 kg	10,500
1 pack of 5 kg	5 kg	2.2 kg	0.55 kg	2,900
Wheat, ½ bag per acre at grand growth	**10 kg**	**4.4 kg**	**1.1 kg**	**5,250**

On wheat, the grower spends Rs 5,250 per acre to apply 4.4 kg of K_2O through the irrigation water at grand growth. VAN prints no figure for the effect of the product on his grain.

Vital Potash 20 kg Rs 10,500 and 5 kg Rs 2,900: VAN farmer price sheet, August 2026. 8.8 kg K_2O = 20 × 0.44; 2.2 kg N = 20 × 0.11. Wheat rate: the published wheat crop plan, ½ bag at grand growth, by fertigation.

40 maunds of wheat take out an estimated 40 kg of K_2O per acre; ½ bag of Vital Potash supplies 4.4 kg.

The table estimates the nutrients taken out in 40 maunds of wheat (1.6 tonnes) per acre with the IPNI removal coefficients used on van.com.pk (North American, not measured in Pakistan), beside the potash Vital Potash applies at grand growth.

Wheat, 1 acre at 40 maunds	K_2O per tonne of grain	K_2O at 1.6 t	Nitrogen at 1.6 t
Taken out in the grain	4.8 kg	7.7 kg	30 kg
Also taken out in the straw (bhusa), per tonne of grain	20 kg	32 kg	19 kg
Grain and straw together	**24.8 kg**	**40 kg**	**50 kg**
Applied in Vital Potash, ½ bag at grand growth		**4.4 kg**	**1.1 kg**

The ½ bag of Vital Potash is applied at grand growth. The rest of the 40 kg of K_2O taken out in the grain and straw must come from basal potash at land preparation or from potassium already in the soil.

Removal per tonne: IPNI nutrient removal tables, metric edition 01/15 (wheat grain 4.8 kg K_2O and straw 20 kg K_2O per tonne of grain; grain 19 kg N and straw 12 kg N per tonne of grain). 40 maunds × 40 kg = 1.6 t. No Pakistani removal table exists on the public record.

Basal potash and Vital Potash go on at different stages; one does not replace the other.

The bag prices are from the VAN farmer price sheet, August 2026. The crop plan applies Vital Potash and the basal potash products at different stages, so Vital Potash does not replace basal potash.

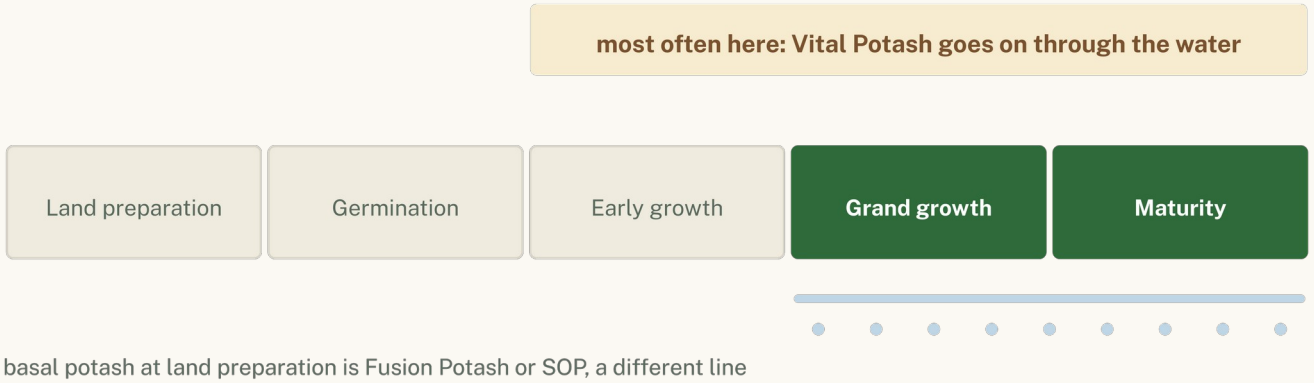

Product	Bag	K_2O in the bag	Stage and method	Price (Rs)
Vital Potash, N 11 · K_2O 44	20 kg	8.8 kg	Crop plan stages, most often grand growth and maturity; through the water	10,500
Fusion Potash, K_2O 50 with S, B, Mg	25 kg	12.5 kg	Land preparation; drill at sowing, broadcast if no drill	11,500
SOP, K_2O 50	25 kg	12.5 kg	Land preparation; drill at sowing, broadcast if no drill	8,000

The dealer explains each product by its stage, not by its price per kilogram. Basal potash goes into the soil at land preparation; Vital Potash goes through the irrigation water at the stages each crop plan gives. MOP is not on the VAN price sheet, so no price is given for it.

Prices: VAN farmer price sheet, August 2026: Vital Potash 20 kg Rs 10,500; Fusion Potash 25 kg Rs 11,500; SOP 25 kg Rs 8,000. K_2O per bag from the declared analysis of each product. MOP has no price on the sheet.

HOW IT IS APPLIED

Applied through irrigation water at the stages each crop plan gives.

Fully water soluble

It dissolves completely, so it goes through drip or flood water. Every crop plan row for a field crop gives fertigation. The date palm plan on van.com.pk broadcasts it, at a rate set by the age of the orchard.

Most often grand growth and maturity

Most crop plan rows apply it at these stages. Wheat gets 1 application, at grand growth; maize, rice and cotton get 2; potato gets 1 at early growth and 1 at grand growth.

Never in place of basal potash

The basal potash at land preparation is Fusion Potash or SOP. Vital Potash goes on at the crop plan stages, and 2 applications of it do not supply all the potash for the season.

OBJECTION 1 OF 8

“Rs 10,500 for a 20 kg bag? Potash is potash.”

What the dealer says

This bag goes on at the stages the crop plan gives, most often grand growth and maturity; it is not the basal potash. On wheat the crop plan uses ½ bag per acre at grand growth, which costs Rs 5,250. It supplies 4.4 kg of K_2O in the irrigation water at grand growth, and it carries boron. The basal potash at land preparation is a different bag at a different price, and the crop plan uses each at its own stage.

The facts behind the answer

- Vital Potash 20 kg Rs 10,500; 5 kg Rs 2,900 (VAN farmer price sheet, August 2026).
- 8.8 kg K_2O and 2.2 kg N per bag; ½ bag on wheat at grand growth by fertigation.
- Fusion Potash 25 kg Rs 11,500 and SOP 25 kg Rs 8,000 are the basal potash products on the same sheet.

Never say: “It gives you X more maunds” or any rupee value per acre for extra yield. VAN has no yield figure for the product.

OBJECTION 2 OF 8

“Fewer kilograms means less feed. 20 kg is nothing.”

What the dealer says

The bag carries 8.8 kg of K_2O, which dissolves completely and goes into the irrigation water at the stages each crop plan gives, most often grand growth and maturity. The crop needs potash to fill, and in 2023 Pakistan applied 83 kg of nitrogen for every 1 kg of potash (K_2O), so many crops may be short of potassium. This bag adds potash at those stages. The rest of the crop’s potash for the season comes from basal potash and from potassium already in the soil.

The facts behind the answer

- Vital Potash page, answers 1 and 2: the crop needs potash to fill; Vital Potash adds potash at the crop plan stages and does not supply all the crop’s potash for the season.
- Wheat at 40 maunds per acre takes out an estimated 7.7 kg of K_2O in the grain and 32 kg in the straw (IPNI coefficients, not measured in Pakistan).

Never say: “2 bags cover your potash for the season.”

OBJECTION 3 OF 8

“I used it and my soil test did not change.”

What the dealer says

Vital Potash is not meant to raise the soil potassium reading. An application at grand growth or maturity feeds the crop in the weeks that follow; it does not rebuild the potassium in the soil. If the soil test reads low, basal potash at land preparation, applied season after season, has to raise the soil potassium. Judge Vital Potash by the grain, the tuber and the fruit, not by the soil report.

The facts behind the answer

- VAN’s flagship audit: Vital Potash adds potash at the crop plan stages; it does not supply all the crop’s potash for the season.
- In 2024-25, K_2O was 1% of the fertiliser nutrients applied in Pakistan (NFDC), so crops draw on the potassium already in the soil, and that supply is being depleted.

Never say: “It raises your soil potassium.”

OBJECTION 4 OF 8

“Can I put it through the drip or the flood water?”

What the dealer says

Yes, that is how it is applied. It is fully water soluble, and every crop plan row for a field crop gives fertigation: dissolve the bag and run it with the irrigation water at grand growth or maturity. No crop plan row gives a foliar rate for it, and VAN gives none.

The facts behind the answer

- The pack reads “water soluble fertilizer”. The crop plans give fertigation on every field-crop row.
- The Vital Potash page lists a foliar rate among the claims VAN does not make.

Never give a foliar rate, such as “1 kg in 100 litres”.

OBJECTION 5 OF 8

“At which stage do I put it on?”

What the dealer says

At the stages each crop plan gives, most often grand growth and maturity; on some crops the plan starts earlier. Wheat: ½ bag at grand growth. Maize: ½ bag at grand growth and ½ at maturity. Cotton: ½ bag at grand growth and ½ at boll formation and maturity. Potato: 1 bag at early growth and 1 at grand growth. Follow the row for your crop. Sowing is the stage for the basal potash.

The facts behind the answer

- The Vital Potash rows of the published crop plans, 12 crop plans, on the crop plan slides.
- VAN, 9 November 2026: at the stages each crop plan gives, most often grand growth and maturity, through the water.

Never say: “Put it on at sowing instead of SOP.”

OBJECTION 6 OF 8

“How many bags per acre?”

What the dealer says

Use the crop plan rate: ½ bag per application on wheat, maize, rice, cotton and chilli; 1 bag on potato, tomato and citrus; 10 kg per application on onion. For sugarcane, see the crop plan slide. Applying more than the crop plan rate does not improve filling: the crop cannot use the extra potash at that stage.

The facts behind the answer

- Rates per acre as published in the crop plans (crop plan slides).
- VAN never calls a potash-weighted grade “balanced”.

Never say: “More bags, more yield.”

OBJECTION 7 OF 8

“Is it registered? What is the licence?”

What the dealer says

It is registered under Pakistan Standard PS 933-2026, with manufacturing licence CM/L-4124/2025, and VAN is the registered maker. Every batch is tested at VAN Lab, accredited by the Pakistan National Accreditation Council (PNAC) as LAB 336, before it ships. On van.com.pk, enter the batch number from your bag, and you can read the certificate for that batch.

The facts behind the answer

- Regulatory table on van.com.pk: Vital Potash, PS 933-2026, CM/L-4124/2025.

Never give a licence expiry date, or a boron percentage as if it were on the certificate.

OBJECTION 8 OF 8

“The bolls are already dropping. Will this stop it?”

What the dealer says

Boll drop in cotton, and thin grain in cereals, can be signs that the crop is short of potassium at filling. The cotton crop plan applies Vital Potash in the irrigation water at grand growth and again at boll formation and maturity. Apply it now, at this stage, as the crop plan says. I cannot promise that it will stop the boll drop: VAN makes no fruit-setting claim, because no trial of this product has measured its effect on fruit setting.

The facts behind the answer

- The grower’s question on the Vital Potash page: bolls dropped, grain thin. Cotton crop plan rows: grand growth; boll formation and maturity.
- Published research (Hussain, Ali and Gardezi 2021, Multan): higher soil potassium reduced boll shedding. This is research on potash, not a result for this product.

Never say: “It stops boll drop”, “it sets more fruit”, “it builds immunity”.

Vital Potash in the published crop plans, per acre.

Crop	Stage	Rate per acre	Method	Pack
Wheat	Grand Growth	½ bag	Fertigation	20 kg
Maize (Corn)	Grand Growth	½ bag	Fertigation	20 kg
Maize (Corn)	Maturity	½ bag	Fertigation	20 kg
Basmati Rice	Grand Growth	½ bag	Fertigation	20 kg
Basmati Rice	Grain Formation & Maturity	½ bag	Fertigation	20 kg
Hybrid Rice	Grand Growth	½ bag	Fertigation	20 kg
Hybrid Rice	Maturity	½ bag	Fertigation	20 kg
Cotton	Grand Growth	½ bag	Fertigation	20 kg

The rows are printed as published in the crop plans on van.com.pk. Coverage: these 3 slides show 12 of the 27 crop plans that name Vital Potash, and 23 of its 52 rows. Every row says fertigation and uses the 20 kg bag. Each rate is per acre, and the crop page scales it to the size of the field.

Vital Potash in the published crop plans, continued.

Crop	Stage	Rate per acre	Method	Pack
Cotton	Boll Formation & Maturity	½ bag	Fertigation	20 kg
Sugarcane, February planting	Early Growth	½ bag + 1 bag (2 applications)	Fertigation	20 kg
Sugarcane, February planting	Grand Growth	½ bag	Fertigation	20 kg
Ratoon Sugarcane	Early Growth	½ bag + 1 bag (2 applications)	Fertigation	20 kg
Ratoon Sugarcane	Grand Growth	½ bag	Fertigation	20 kg
Potato	Early Growth	1 bag	Fertigation	20 kg
Potato	Grand Growth	1 bag	Fertigation	20 kg
Tomato	Germination	1 bag	Fertigation	20 kg

The rows continue from the previous slide. Each rate is per acre, and the crop page scales it to the size of the field.

Vital Potash in the published crop plans, continued.

Crop	Stage	Rate per acre	Method	Pack
Tomato	Early Growth	1 bag	Fertigation	20 kg
Tomato	Grand Growth	1 bag	Fertigation	20 kg
Chili	Early Growth	½ bag	Fertigation	20 kg
Chili	After Picking	½ bag	Fertigation	20 kg
Onion	Grand Growth (40 DAT)	10 kg	Fertigation	20 kg
Onion	Bulb filling (50 DAT)	10 kg	Fertigation	20 kg
Citrus, 5 years and over	Grand Growth	1 bag	Fertigation	20 kg

The rows continue from the previous slide. Each rate is per acre, and the crop page scales it to the size of the field.

WHAT VAN DOES NOT CLAIM FOR THIS PRODUCT

A dealer who makes any of these claims is speaking for himself, not for VAN.

1. A boron percentage. None is printed on the pack.
2. A yield figure, an effect on disease, or an improvement in fruit set.
3. A rate for spraying Vital Potash on the leaves (a foliar rate). Apply it only as the crop plan states.
4. That 2 applications supply all the potash a crop needs in a season. Fusion Potash or SOP is the basal potash, and Vital Potash is applied at the stages each crop plan gives.
5. A sugarcane ripening claim or a mango flowering claim.
6. That a potash-weighted grade is “balanced”, or that any bag contains recovered potash.

HOW A GROWER VERIFIES A BAG

Every batch is tested, and the batch number on the bag identifies its certificate.

1 · The batch number

Every bag carries the batch number. Read it to the grower and show him where it is printed.

2 · The certificate of analysis

On van.com.pk, a grower can read the certificate of analysis for any bag by entering the batch number printed on it. The grower does not need to post a sample.

3 · The laboratory

VAN Lab is accredited by the Pakistan National Accreditation Council (PNAC) to ISO/IEC 17025:2017, the international standard for testing laboratories, as LAB 336. Every batch is released through the laboratory before it ships. The certificate carries the laboratory's number.

What a certificate for Vital Potash shows

The certificate reports the nitrogen and K_2O measured in the batch, against the declared analysis NPK 11.0.44. The bag carries the batch number, Pakistan Standard PS 933-2026 and licence CM/L-4124/2025. No boron figure is on the bag, and none is given here. This training shows no batch result. A grower can read the certificate of his own batch on van.com.pk by its batch number.

THE URDU LINES · REVIEWED 27 SEPTEMBER 2026

The lines a dealer says in Urdu.

The first line is the product's main message. Where its nutrient has one, the line gives VAN's promise word: the 1-word brand message VAN uses for that nutrient. The other 3 lines are key sentences of this deck. Each English line gives the meaning of the Urdu beside it. Send any correction to partner@van.com.pk.
