

DEALER TRAINING · SEPTEMBER 2026

Vital Potash

N 11, K₂O 44, fully water soluble, boron coated in 2 forms. 20 kg.
Made in Lahore.

For VAN dealers and the field team, written so a dealer can repeat it to a grower. Lahore.

What a dealer says in 30 seconds.

Vital Potash is N 11, K₂O 44, fully water soluble, 20 kg, with boron coated onto the granule in 2 forms. The crop grows on nitrogen and fills on potash, and Pakistan applies about 1 kg of potash for every 83 kg of nitrogen. Vital Potash goes through the flood or drip water at grand growth and maturity, the fill window, ½ to 1 bag an acre as the programme says. The small nitrogen share keeps the plant working through fill without pushing new leaf. It is the fill line; the basal potash at land preparation is Fusion Potash or SOP.

The 4 things it must contain

1

The bag: 20 kg, N 11, K₂O 44, water soluble, PS 933-2026. 8.8 kg K₂O and 2.2 kg N in every bag.

2

The mechanism: the crop grows on nitrogen and fills on potash; potash moves the sugar into the grain, tuber or fruit.

3

The stage: grand growth and maturity, through the water. The fill line, not the season's potash.

4

Boron: on the granule, in 2 forms, sodium borate fast and calcium borate slow. Named, never numbered.

Say it in the grower's own words. Every figure in these 30 seconds is on the bag, in the published crop programme, or in the named evidence on the slides that follow.

THE BAG

What the bag says, and what it is registered as.

20 kg

the bag. 8.8 kg of K₂O and 2.2 kg of nitrogen in every bag, from the declared analysis. A 5 kg pack exists too.

K₂O 44

potash, declared as NPK 11.0.44 on the front, fully water soluble.

N 11

the small nitrogen share that keeps the plant working through fill without pushing new leaf.

1 to 4

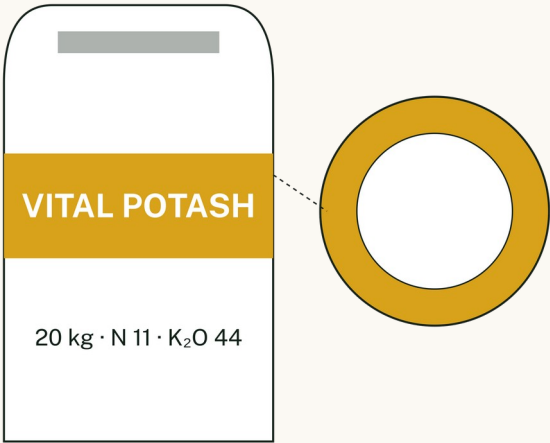

nitrogen to potash, about. Every crop with published uptake data takes more K₂O than nitrogen.

2014

the year VAN began coating boron onto the potash granule on its own line, developed and built locally.

1%

of all nutrient applied in Pakistan is potash, as the Crop Force bag prints.

Registered as	Pakistan Standard	Manufacturing licence
Vital Potash	PS 933-2026	CM/L-4124/2025

No expiry date is printed in this deck. The licence number is what a dealer quotes.

A GROWER'S QUESTION

“I fed the crop well and it still filled light. The bolls dropped, the grain stayed thin. Why?”

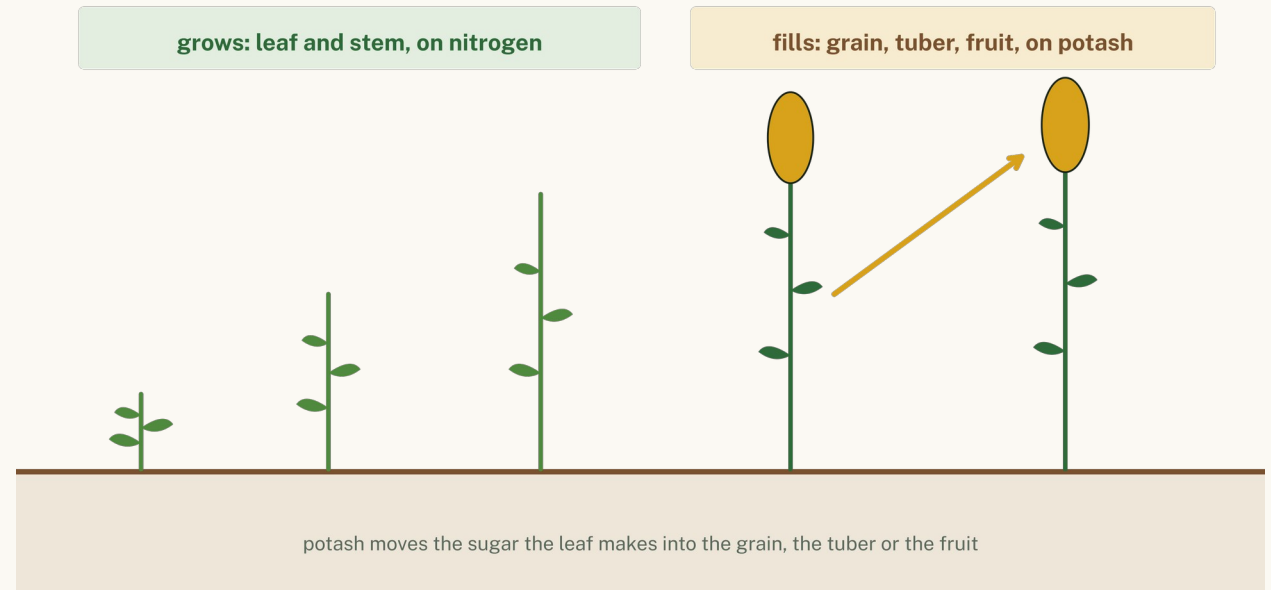

That is the question on the Vital Potash page of van.com.pk, in the grower's own words. He fed nitrogen and the crop grew; he did not feed potash at fill, and the crop filled light. The answer is 3 ideas: what potash does, when it is needed, and what rides on the granule.

The 3 answers on the next 3 slides, 1 idea each.

The crop grows on nitrogen and fills on potash.

Potash moves the sugar the leaf makes into the grain, the tuber or the fruit, and thickens the cell wall against heat, drought and disease. Every crop with published uptake data takes more K_2O than nitrogen. Pakistan applies about 1 kg of potash for every 83 kg of nitrogen.

Say it like this: “You fed the growing. You did not feed the filling.”

Leaf stage in leaf green, fill stage with the head of grain. A picture of the idea, not a measurement.

Made for the fill window.

N 11, K₂O 44, fully water soluble. It goes on at grand growth and maturity, through the fertigation or flood water, when the crop has stopped building leaf and started filling. The small nitrogen share keeps the plant working through fill without pushing new leaf. It is a stage top-up, not the season's potash.

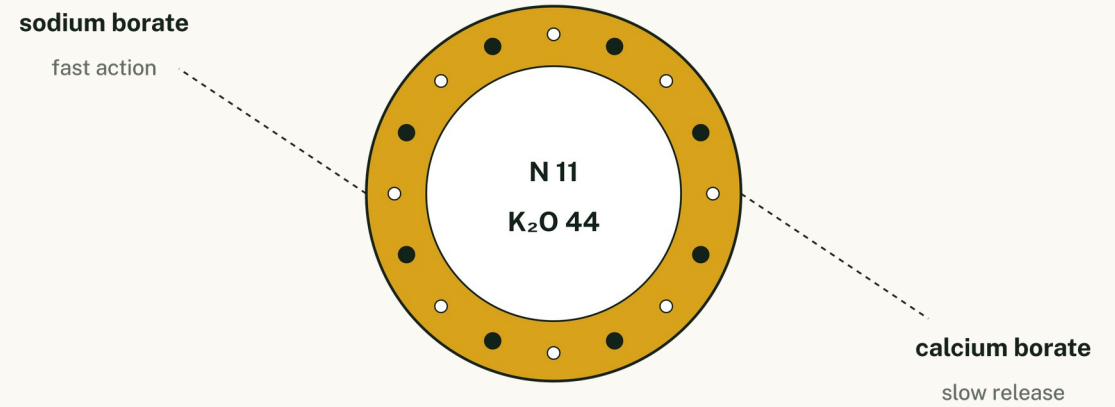

Say it like this: “Put it through the water when the crop starts to fill, not at sowing.”

The 5 stage names are the site's. Which 2 carry Vital Potash for your crop is on the programme slides.

Boron rides on the granule, in 2 forms.

Boron carries sugar to the flower and sets the seed and the fruit. Since 2014 VAN has coated it onto the potash granule on its own line, developed and built locally, in 2 forms on 1 granule: sodium borate for fast action and calcium borate for slow release. It lands where the potash lands and cannot separate in the bag. Named, never numbered, because no figure is on the bag.

coated on VAN's own line since 2014. Boron is named on this deck, never numbered.

The 2 forms are drawn as 2 kinds of fleck. No boron percentage is printed anywhere, by ruling.

Say it like this: "The boron is on the granule, 2 forms, so it lands where the potash lands."

THE EVIDENCE

What is verified for Vital Potash, and what is not.

No trial of Vital Potash itself is on VAN's record. What a dealer may state as fact is the bag, the licence, the national figure and the published research below, each as what it is.

Item	What it says	How a dealer may use it
The bag	NPK 11.0.44, multi nutrient fertilizer, water soluble, 20 kg. Boron is not named on the front.	As fact. Boron is named by VAN, never numbered.
The licence	Pakistan Standard PS 933-2026, manufacturing licence CM/L-4124/2025.	As fact.
National potash use	K ₂ O is 1.0% of Pakistan's nutrient use, unchanged since 1999 to 2002 (NFDC; FAO). About 1 kg of potash for every 83 kg of nitrogen.	As fact. Printed on the Crop Force bag and the site.
Published research, not VAN trials	Sindh banana (Memon et al. 2010): potash applied far below removal; correcting potash alone lifted yield from 51.2 to 60.8 t/ha. Multan cotton (Hussain, Ali and Gardezi 2021): soil potassium reduced boll shedding.	Spoken, as research on potash. Never as a Vital Potash result.
Uptake pattern	Every crop with published uptake data wants K ₂ O above nitrogen above P ₂ O ₅ .	As fact, from the published tables.
Not on file	A trial, lab record or literature note specific to Vital Potash; a boron figure; a yield figure for the product.	Not said.

Sources: flagship audit section 2c (ON-PACK and VERIFIED items only); regulatory table on van.com.pk; Flagship.tsx. The 2019 copy's "builds plant immunity" and "enhances fruit setting" are do-not-print and do not appear.

The bag, and the wheat application, in the grower’s own back-of-envelope.

Prices from the VAN farmer price sheet, Aug 2026, delivered farmer price. K₂O and nitrogen from the declared analysis. The wheat programme puts ½ bag on at grand growth, by fertigation.

Vital Potash, N 11 · K ₂ O 44	Weight	K ₂ O	Nitrogen	Rupees
1 bag of 20 kg	20 kg	8.8 kg	2.2 kg	10,500
1 pack of 5 kg	5 kg	2.2 kg	0.55 kg	2,900
Wheat, ½ bag an acre at grand growth	10 kg	4.4 kg	1.1 kg	5,250

On wheat the grower spends 5,250 rupees an acre to put 4.4 kg of K₂O through the water at the stage the grain fills. That is the counter arithmetic. What it does for his grain is not a number VAN prints for the product.

Vital Potash 20 kg PKR 10,500 and 5 kg PKR 2,900: pricing.ts FARMER_PRICE. 8.8 kg K₂O = 20 × 0.44; 2.2 kg N = 20 × 0.11. Wheat rate: CROP_PLANS, ½ bag, grand growth, fertigation.

The potash account for an acre of wheat.

What 40 maunds of wheat (1.6 tonnes) takes off the field, from the IPNI removal tables the site’s balance block uses, beside what the fill application puts on.

Wheat, 1 acre at 40 maunds	K ₂ O per tonne of grain	K ₂ O at 1.6 t	Nitrogen at 1.6 t
Grain taken off	4.8 kg	7.7 kg	30 kg
Straw (bhusa) taken off too, per tonne of grain	20 kg	32 kg	19 kg
Grain and straw together	24.8 kg	40 kg	50 kg
Vital Potash, ½ bag at grand growth, puts on		4.4 kg	1.1 kg

The ½ bag at fill is a top-up for the stage that decides the grain. The season’s potash is the basal line at land preparation and the soil’s own reserve. 1% of all nutrient applied in Pakistan is potash; the account above shows why the crop draws on the reserve.

Removal per tonne: removal.ts (IPNI nutrient removal tables, metric 01/15; wheat grain K₂O 4.8, straw 20 per tonne of grain; N 19 and 12). 40 maunds × 40 kg = 1.6 t. No Pakistani removal table exists on the public record, as the site says.

The basal line and the fill line are 2 jobs, not 1 choice.

Bag prices side by side from the VAN farmer price sheet, Aug 2026. A grower does not pick 1 of these in place of another; the programme puts them at different stages.

Product	Bag	K ₂ O in the bag	Stage and method	Rupees
Vital Potash, N 11 · K ₂ O 44	20 kg	8.8 kg	Grand growth and maturity, through the water	10,500
Fusion Potash, K ₂ O 50 with S, B, Mg	25 kg	12.5 kg	Land preparation, broadcast	11,500
SOP, K ₂ O 50	25 kg	12.5 kg	Land preparation, broadcast	8,000

The dealer sells the stage, not the kilogram. Basal potash goes in the ground before the crop; Vital Potash goes through the water when the crop fills. MOP is not on the VAN price sheet, so no price is printed for it.

Prices: pricing.ts FARMER_PRICE, vital-potash 20 kg 10,500; fusion-potash 25 kg 11,500; sop 25 kg 8,000. K₂O per bag from the declared analyses in pricing.ts MASTER_PRODUCTS. MOP carries no price on the sheet.

HOW IT GOES ON

Through the water, at the fill window.

basal potash at land preparation is Fusion Potash or SOP, a different line

Fully water soluble

It dissolves completely, so it goes through drip or flood water. Every programme row for a field crop says fertigation. Date palm is the exception, broadcast per tree.

At grand growth and maturity

The stage where the crop stops growing leaf and starts filling grain, tuber or fruit. Wheat once, at grand growth; maize, rice and cotton twice; potato at early and grand growth.

Never in place of basal

The basal potash at land preparation is Fusion Potash or SOP. Vital Potash is the fill line. 2 applications of it are not the season's whole potash.

“10,500 for a 20 kg bag? Potash is potash.”

The dealer says, out loud

This bag is the fill line, not the basal potash. On wheat it is ½ bag an acre, 5,250 rupees, put through the water at grand growth: 4.4 kg of K₂O at the stage the grain fills, with the boron riding on it. The basal potash at land preparation is a different bag at a different price, and the programme uses both at their own stage.

The fact behind it

- Vital Potash 20 kg PKR 10,500; 5 kg PKR 2,900 (VAN farmer price sheet, Aug 2026).
- 8.8 kg K₂O and 2.2 kg N per bag; ½ bag on wheat at grand growth by fertigation.
- Fusion Potash 25 kg 11,500 and SOP 25 kg 8,000 are the basal lines on the same sheet.

Never say: “It gives you X more maunds” or any rupees-per-acre of extra yield. No yield figure exists for the product.

“Less kilograms means less feed. 20 kg is nothing.”

The dealer says, out loud

It is 8.8 kg of K_2O that dissolves completely and goes through the water at the stage that decides the fill. The crop grows on nitrogen and fills on potash; Pakistan puts on about 1 kg of potash for every 83 kg of nitrogen, so the fill stage is where the crop is usually short. This bag is a top-up for that stage. The season's potash is the basal line and the soil's reserve.

The fact behind it

- Flagship answers 1 and 2: grows on nitrogen, fills on potash; a stage top-up, not the season's potash.
- Wheat at 40 maunds takes off 7.7 kg K_2O in grain and 32 kg more in straw (IPNI).

Never say: “2 bags cover your potash for the season.”

OBJECTION 3 OF 8

“I used it and my soil test did not change.”

The dealer says, out loud

It is not meant to. A fill application feeds the crop in the weeks it fills; it does not rebuild the potassium in the soil. If the soil test reads low, that is the basal line's job at land preparation, season after season. Vital Potash is judged in the grain, the tuber and the fruit, not in the soil report.

The fact behind it

- Audit 2b: a stage top-up, not the season's potash.
- The national picture: potash is 1% of nutrient use, so soil reserves are being drawn down.

Never say: “It raises your soil potassium.”

“Can I put it through the drip or the flood water?”

The dealer says, out loud

Yes. That is exactly how it is applied. It is fully water soluble, and every programme row for a field crop says fertigation: dissolve the bag, run it with the water at grand growth or maturity. Foliar is a method some plans name; the rate is the plan's, and this deck gives no foliar rate.

The fact behind it

- ON-PACK: water soluble fertilizer. CROP_PLANS: fertigation on every field-crop row.
- Flagship wontClaim: no foliar rate is printed.

Never say: A foliar rate, such as “1 kg in 100 litres”.

“Which stage?”

The dealer says, out loud

Grand growth and maturity: the fill window. Wheat, ½ bag at grand growth. Maize, ½ bag at grand growth and ½ at maturity. Cotton, ½ bag at grand growth and ½ at boll formation and maturity. Potato, 1 bag at early growth and 1 at grand growth. Not at sowing: that is the basal line's stage.

The fact behind it

- CROP_PLANS rows for Vital Potash, 12 crops on the programme slides.
- Flagship answer 2: grand growth and maturity, through the water.

Never say: “Put it on at sowing instead of SOP.”

“How many bags an acre?”

The dealer says, out loud

What the programme says: ½ bag per application on wheat, maize, rice, cotton, chili; 1 bag on potato, tomato, banana, citrus and watermelon. Onion is 10 kg per application. More than the programme is not more fill; it is potash the crop cannot use in that window.

The fact behind it

- Rates per acre as published in the crop programmes (programme slides).
- A potash-weighted grade is never called balanced (brand master gate).

Never say: “More bags, more yield.”

“Is it registered? What is the licence?”

The dealer says, out loud

Pakistan Standard PS 933-2026, manufacturing licence CM/L-4124/2025, VAN as the registered maker. Every batch is tested at VAN Lab, PNAC LAB 336, before it ships. Read the batch number off the bag and VAN sends you that batch's certificate, free.

The fact behind it

- Regulatory table on van.com.pk: Vital Potash, PS 933-2026, CM/L-4124/2025.

Never say: An expiry date, or a boron percentage as if it were on the certificate.

“The bolls are already dropping. Will this stop it?”

The dealer says, out loud

Boll drop and light grain are what a potash shortage at fill looks like; the cotton programme puts Vital Potash on at grand growth and again at boll formation and maturity, through the water. Put it on now, at this stage, as the programme says. I will not promise it stops the drop: VAN prints no fruit-setting claim, because no trial of this product measured one.

The fact behind it

- Flagship question: bolls dropped, grain thin. Cotton rows: grand growth; boll formation and maturity.
- Published research (Hussain et al. 2021, Multan): soil potassium reduced shedding. Research on potash, not a product result.

Never say: “It stops boll drop”, “it sets more fruit”, “it builds immunity”.

Vital Potash in the published programmes, per acre.

Crop	Stage	Rate per acre	Method	Pack
Wheat	Grand Growth	½ bag	Fertigation	20 kg
Maize (Corn)	Grand Growth	½ bag	Fertigation	20 kg
Maize (Corn)	Maturity	½ bag	Fertigation	20 kg
Basmati Rice	Grand Growth	½ bag	Fertigation	20 kg
Basmati Rice	Grain Formation & Maturity	½ bag	Fertigation	20 kg
Hybrid Rice	Grand Growth	½ bag	Fertigation	20 kg
Hybrid Rice	Maturity	½ bag	Fertigation	20 kg
Cotton	Grand Growth	½ bag	Fertigation	20 kg
Cotton	Boll Formation & Maturity	½ bag	Fertigation	20 kg
Sugarcane, February planting	Early Growth	½ bag + 1 bag (two applications)	Fertigation	20 kg
Sugarcane, February planting	Grand Growth	½ bag	Fertigation	20 kg
Ratoon Sugarcane	Early Growth	½ bag + 1 bag (two applications)	Fertigation	20 kg

Rows as published in van.com.pk's crop programmes, 12 of the 28 crops. Every field-crop row is by fertigation. A rate is per acre; the crop page scales it to the field.

Vital Potash in the published programmes, continued.

Crop	Stage	Rate per acre	Method	Pack
Ratoon Sugarcane	Grand Growth	½ bag	Fertigation	20 kg
Potato	Early Growth	1 bag	Fertigation	20 kg
Potato	Grand Growth	1 bag	Fertigation	20 kg
Tomato	Germination	1 bag	Fertigation	20 kg
Tomato	Early Growth	1 bag	Fertigation	20 kg
Tomato	Grand Growth	1 bag	Fertigation	20 kg
Chili	Early Growth	½ bag	Fertigation	20 kg
Chili	After Picking	½ bag	Fertigation	20 kg
Onion	Grand Growth (40 DOT)	10 kg	Fertigation	20 kg
Onion	Maturity (50 DOT)	10 kg	Fertigation	20 kg
Citrus, 5 years and over	Grand Growth	1 bag	Fertigation	20 kg

Rows as published in van.com.pk's crop programmes, 12 of the 28 crops. Every field-crop row is by fertigation. A rate is per acre; the crop page scales it to the field.

WHAT VAN WILL NOT CLAIM FOR IT

A dealer who says any of these is speaking for himself, not for VAN.

1

A boron percentage. None is printed on the pack.

2

A yield figure, a disease or immunity effect, or a fruit-setting claim.

3

A foliar rate. Foliar is a method the plan names; the rate is the plan's.

4

That 2 applications are the season's whole potash. Fusion Potash is the basal line; this is the fill line.

5

A sugarcane ripening claim or a mango flowering claim.

6

That a potash-weighted grade is "balanced", or that any bag contains recovered potash.

Every batch is tested. The bag carries the proof.

1 · The batch number

It is printed on the bag. Read it to the grower and show him where it is. Every bag of every batch carries one.

2 · The certificate of analysis

For any batch, free on request. Send the batch number off the bag to kisan@van.com.pk or the helpline, and the certificate for that batch comes back. No sample to post.

3 · The laboratory

VAN Lab, PNAC LAB 336, accredited to ISO/IEC 17025:2017. Every batch is released through it before it ships. The certificate carries the laboratory's number.

What a certificate for Vital Potash shows

The declared analysis tested for the batch: nitrogen and K₂O against NPK 11.0.44, with the batch number, the Pakistan Standard PS 933-2026 and licence CM/L-4124/2025 on the bag. No boron figure is on the bag or in this deck. No certificate for a Vital Potash batch was on file for this deck, so no batch reading is printed here; the grower asks for his own batch's certificate.

The lines a dealer says in Urdu.

The first line is the promise word from the VAN brand master. The other 3 are the deck's key sentences, translated in a first pass and not yet reviewed by VAN. Say them, and send corrections to partner@van.com.pk.

GUARD. The promise word for potash.

Urdu first pass, unreviewed

فصل کی ڈھال

The crop grows on nitrogen and fills on potash.

Urdu first pass, unreviewed

فصل نائٹروجن پر بڑھتی ہے اور پوٹاش پر بھرتی ہے

Put it through the water when the crop fills, at grand growth and maturity.

Urdu first pass, unreviewed

جب فصل بھرنے لگے تو پانی کے ساتھ دیں

Boron is on the granule, in 2 forms.

Urdu first pass, unreviewed
